AJAX Drive UI's - AJAX stands for asynchronous javascript & XML which makes it possible for you to develop web pages that have a faster user response and doesn't require the whole DOM to be thrown out and reloaded. Meaning parts of websites will load individually without the whole webpage having to load which creates a faster user interface and it is also more accessible and better looking.

VueJS - Vue is focused on specifically the viewable layer of the website and it makes it easier to modify your code without having to pull the full DOM for example I changed data in a simple example on the vue.js website to say "Hello Joe" rather than "Hello Vuejs" in the developer tools on google chrome and this change happened instantaneously. It is a simple framework additive that helps you edit your web page easier.

PHP- stands for hypertext preprocessor. This is a scripting language and it is widely used because scripting languages need to have the processor installed. PHP is widely installed. You can use PHP to make static or dynamic web pages in other coding environments. Basically this scripting language is meant to enhance the webpage you have.

Scrum- Scrum is a product building software that teams of people will use to develop something like an app. It is good to use because it can streamline a project and give the developers the ability to run updates in the building or sprint phase.

Axios- Axios is used to make requests to fetch or save data much like jquery

Laravel- a web application framework that is used to create creative syntax and make developing a web page easier and enjoyable but it can also do large format editing on applications.

Pixel perfect- developing a web page that follows your web development perfectly or "pixel for pixel"

JSON- a lightweight data interchange format that has a language independent to other languages but follows similar syntaxes to others.

EDI-ansi x12- A standard developed for data interchange by the American National Standards institute.

React- an open source library for javascript used by websites like Facebook.
